Cooperative AI & Apart Research

Abstract

Write a concise summary of your project in a few paragraphs, staying under 250 words. Include the specific cooperative challenge your agent addresses, key features of your design, performance summary, main insights, and potential implications for cooperative AI. This abstract should accurately represent the content of your report, including results and conclusions. You may adjust the format and content of this template as needed, as long as you stay within the 4-page limit.

Keywords: Cooperative Agents

1. Introduction

Provide an overview of your research or application and its general idea. This section should give a free-form write-up of how your work contributes to the field of cooperative AI and what your project has been all about. Address the importance of your demonstration regarding communication and its potential impact. Briefly introduce the concept of cooperative AI, describe the specific problem or scenario your agent tackles within the Concordia framework, and outline your project's main objectives

¹ Research conducted at the [Concordia Contest Hackathon](#) 2024

2. Overview

Describe the general idea of your research or application and explain why you decided to approach it in this particular way. Include screenshots of your application or visualizations of your agent's performance. Provide a link to a 2-minute video demonstrating your agent in action within the Concordia framework. Discuss how your agent handles communication, decision-making, and cooperation in various scenarios.

3. Code

Write about your codebase and GitHub repositories. Explain your choice of language model and how you interfaced with it within the Concordia framework. Discuss any APIs or external libraries you've chosen to use and why. Provide an overview of your code structure and any key algorithms or techniques implemented.

4. Discussion and Conclusion

Use this section to include observations, discussions on potential expansions if you had more time, results, and broader implications. Interpret your results in the context of cooperative AI challenges. Discuss any unexpected findings or interesting behaviors exhibited by your agent. Reflect on the strengths and limitations of your approach, and suggest potential improvements or future directions for your work. Conclude with the broader implications of your project for the field of cooperative AI.
